PROGRAMMING IN SWIFT
PART 4
COLLECTIONS

CLOSURES

Create a constant array called names which contains some names as strings (any names will do — make sure there's more than three though!). Now use reduce to create a string which is the concatenation of each name in the array.

```
37
38 // TODO: Write solution here
39
```

Using the same names array, first filter the array to contain only names which have more than four characters in them, and then create the same concatenation of names as in the above exercise. (Hint: you can chain these operations together.)
